

COVID-19 Vaccine Safety Survey

You are invited to take part in a surveillance study that is looking to determine how often adverse events (side effects) occur after receiving a COVID-19 vaccine.

Scan the QR code using your camera or a QR scanner app to register for the survey

COVID-19 Vaccine Safety Survey

More Information

This study will collect information about health events after receiving COVID-19 vaccines using a web-based survey. We want to know about any health problems that develop after the COVID-19 vaccine which prevent you from going about your daily activities and/or cause you to seek medical care. The study is being conducted across Canada. Our goal is to have 50,000 Albertans complete the surveys for each COVID-19 vaccine.

What does the study involve?

You will be asked to complete 3 online surveys (each survey should take less than 5 minutes to complete):

- a) 8 days AFTER you get the first COVID-19 vaccine.
- b) 8 days AFTER you get the second COVID-19 vaccine.
- c) 6 months AFTER you get the COVID-19 vaccine.

If you have any questions about this study please contact the ACHIEVE Research Team at 403-955-5724 or achieve@ucalgary.ca.
